Ethics → *Simple* → *Speed* → *Quality* → *Results*

Software Development profile

12+ years of extensive Software Development experience in various domains.

Super Simple Software LLP has proven record in creating high impacts products.

These simple to use products had always improved Speed, Productivity and Quality.

We have successfully demonstrated technology solutions in

- MIS Reporting

- Engineering Productivity Enhancements

- Documentation Activities Automation

- Text and Tags Data Analysis and auto correction

- Information Routing

- Human Centric and simple design to create high usability

- Productivity and Profit

- Mobile friendly design and architecture

- Web and Social Media Integration

- Latest production technology and techniques for best results, ALWAYS

BusinessCenter™

Business Center TM

- With Business Center TM, integrate every process in your business while improving the quality of several areas simultaneously

- Business Center TM helps to increase your production levels and to control your costs more efficiently, and this means that you will be able to control the whole enterprise more efficiently

- Get a profound increase in availability of information. This helps you to get real time info to make accurate and more profitable decisions

- Expect a positive change in all the functions and processes in you organization

  - Processing and organizing financial data.

  - Integral strategic planning

  - Transparency and control in daily activities

  - Effective communication with real time and dynamic reporting

  - Human resources module to optimize investments over employees.

Applications

- Retail

- Logistics and Fleet Management

- Real Estate

- Manufacturing

- Customer Support and Help Desk

- Textile

- E-commerce

Super Simple Software work profile

Internet Software

Internet Software

- Software that runs on internet
  (Eg. Gmail, Facebook, Flipkart, Magic Bricks)

- We will help take your business online

- Be always online. Your own showroom where you can sell your product service over internet 24 x 7

- No need to publish on OLX and Just Dial or any other online public market place, where your competitors sales just besides you

- Internet software can be use for gathering data from multiple locations with minimum investments

- Eg, Gather data centrally about material stock from multiple storage locations and sales locations.

- Track transactions from all your branches to single location

- Your own Customer Support system

- Internet Software are created in either .Net or PHP technology

Windows Software

Windows Software

Software that runs on a MS Windows computer
(Eg. MS Word, Excel)

We experience in making simple to use software that helps in increasing day to day working productivity

- One of our inhouse production is a simple to use MIS reporting stand-alone system

- Our another innovative systems shall reverse engineer existing systems and designs to produce reports and direct output any desired form

- We have also designed software system that automatically read data from existing systems and presents summarized and helpful information to the management

- Also many other to save lots of manual efforts in day to day working.

Repetitive and manual daily work in any organization always results in time wastage and quality loss due to human error

- Our expertise in Windows based software is in Microsoft's .Net technology

Software Projects and Products
.Net Projects

I. *Design Basis*

- **C#, MVVM, WPF**, XML, Dev Express

Our team Implemented this highly dynamic, UI centric, standalone and secured WPF app, for a Fortune 500 Engineering MNC. This is an analytical tool that helps technical sales team to produce a ready to share proposal report for any customer. This tool itself is a real time analytical and graphical presentation that takes in customer design requirement as input. Sales team would generate an on the spot MS Word report with cost, time, power, space, weight analysis of various proposed technology scenarios for that specific customer's project needs.

Software Projects and Products

.Net Project

II.   *Pattern Mining,* **C#, MVVM, WPF, XML, Dev Express, Reports**

Super Simple Software has developed this pattern mining solution for a Fortune 500 Engineering MNC. This is a .Net technology product that, mines patterns from huge amount of engineering data and source code. The retrieved 'pattern mined' info is reported in a Pareto's analysis form. Reported analytical data is used by our client to save 70% or their efforts in delivering projects.

III.   *Project Activity Tracking Tool* **C#, Asp.Net, SQL, Web App, WCF**

Our team developed this solution for one of our MNC client with large variety of products and services. Challenge in project was to support larger variety of ever changing client's services and products. Every service and product has its own set of parameters structure and processes. Patt is a web based system that serves the purpose. Designed the dynamic UI generation architecture to support ever evolving products. Dedicated and highly dynamic team lead to successful execution of the project which in turn resulted in as extremely happy customer.

IV. *DeltaV Engineering Migration Automation*

- **C#, MVVM, WPF**, XML, Dev Express, Reports, MS Visio Automation

Our team has designed and developed this plug-in oriented architecture, that would reverse engineer our client's end customer's existing system. We were able to understand highly complicated client's niche domain and project engineering. With this product, our team was able to deliver solution that help achieve major level of automation in our client's Migration Projects. Our team developed these plug-ins to import data from Honeywell TDC 3000, Invensys Foxboro IA and Invensys Foxboro 1A systems. The various plugins would parse, analyze and reports multi format backup data from competitive DCS system and create various outputs, either directly in our client's technology or in form of easy to read reports.

Software Projects and Products
.Net Projects

V. *Engineering Drawings Generator* C# 3.5, MS Visio, *Win App*

Our team managed and executed complete lifecycle of a universal of the product. Another engineering time productivity tool that would parse multiple programming language syntaxes, analyze the logic inside script and generate accurate Flowcharts / Block Diagrams / Logic Diagram. Our clients would save lot of time in reverse engineering end customer's systems

VI. *'Test Protocol Document' generator tool* C# 3.5, MS Visio, *Win App*

Executed, this tool that automates the process of creating structured 'Test Documents' from selected structured 'Specification Documents'.

Software Projects and Products
.Net Projects

VII.   *Burn-down chart tool* VB.Net 3.5, MS Excel (Win App)

Developed this tool that aids analysis and tracking for project management, based on SCRUM operations. Any deviation from Scope, Cost or Schedule is can be traced from graphical representation of the collected data

VIII.   *Operational Keyboard Driver* C# 3.5, MS Visio, Win DLL

Developed driver software to help Emerson DeltaV send signal to the proprietary keyboard hardware developed by third party vendor. Over all process to signal Emerson DeltaV alarms on key board was designed

Software Projects and Products

.Net Projects
Heath-care DICOM and PACS domain

Super Simple Software LLP executed these customer's flag ship products. Our US based customer got this complete software product solution developed from Super Simple Software with complete satisfaction and long time support.

We continue to support further product development and version release management.

I. DICOM Ingestion, **Technology**: *C# 4.6.2, WPF Application, MVVVM*

Imports the DICOM images to the 'modality device'. Bulk image import, Image conversion, Auto Import, Image search and 'repair DICOM-tags' of the DICOM-images are few of the implemented features.

II. PACS To CD **Technology**: *C# 4.5, MVC Web Application, Windows Application and Windows Services*

This Product automates the Medical DICOM Images (Xray, MRI, etc) distribution on CD/DVD or other optical drives. Our team has designed complete Product Architecture and also executed the product development. This is the flagship product for our US based customer.

Software Projects and Products
.Net Projects
Heath-care DICOM and PACS domain

III. *DICOM Query Retrieve ,* **Technology:** C# 4.5, API

Designed and executed the project. The service handles the C-Find and C-Move Requests to PACS system. This library API architecture is part of many other DICOM Products.

IV. *PACS Local Storage,* **Technology:** C# 4.5, Windows Service, SQL, API

Local Storage serves as an intelligent archival module of the DICOM Images in the PACS Product. Its 24x7 server and highly performance optimized service for DICOM images. These images are also processed by complex algorithm to extract and store information on server. The Local Storage also responds to incoming C-Find and C-Move Requests of various levels of the associating modalities.

Software Projects and Products
MIS, Data Gathering, Mining and Reports Solutions

Super Simple Software LLP hosts dedicated team for Data solution development. We have developed MS excel based reporting architecture that can gather, extract and mine information from machines, system log, existing software, monitoring systems, manual data entry systems.

We are experienced in generating Excel reports for OPC data source.

OPC data can extracted, mined, reported from any DCS system or PLC SCADA system that supports OPC standards.

Our reports systems makes profound impact on increase in productivity for our Customers and there employees. We have resolved both critical and highly challenging scenarios for our customers in data gathering, mining and reports generation.

One of our reporting system can be hosted right inside MS Excel plugin hence very low impact in organization's security policy. As no other software are required to be installed

Other major Software Projects and Products

.Net Projects

- Bio Metric attendance App

- Custom made software solution, some ERP MODULES

- Gym Management Software (Web Application-SAAS)

- University Management Solution

   A complete System from Enrollment Module , Academic module , Exam Module specially developed multi layer Encryption, Convocation , Account and many other details

- Response Track System

- Gate Activity Tracking System

- Finance based Software in CMBS / RMBS

Mobile Software

Mobile Software

- Your own custom mobile apps that runs on Windows Mobile, Android Mobile and I-Phone (Eg. Gmail, Facebook, Flipkart)

- Use the mobile craze for your business

- Publish your and business information on your own custom mobile app

- You can get direct sale from mobile software, Eg. Flipkart app

- Send your product services updates and various sales schemes directly on your customers mobile, who is using your app

- Collect sales data from your executives who are always on move

- Collect progress and status about work from employees who are always outside office location

- Mobile apps are created in either Xamarin, Android or I-OS platform depending on your requirement

Mobile Apps Experience

- Customer Data Collection, Hybrid App for US based supermarket Chain
  - Stores IP , GEO INFO, Some Analysis Info
  - Auto Respond , Email, Newsletter Feed

- Security Vault

- Android based Security Vault using AES encryption and sync with user's google drive. Tree structure for group assigning-item to encrypt.

- Restaurant order app

- College library search with isbn / qr code college / school result

- Marketing Track (Hybrid App)Multilevel access and authentication for company's marketing track management.

- Smart Communication (wifi-client device communication) and perform some algorithms on it (android + ios6, ios 7)

- High-tech Automation for German based MNC (IOS 7) .. project is on the floor.

Technology consultancy

S S EEnterprise	Windows Software	Internet Software	Mobile Apps
Python (Ubuntu)	.Net – SQL	PHP – MySQL (Linux or Windows)	Android
Postgre SQL	MS Office	.Net – SQL (Windows)	I-OS
-	--	--	.Net xamarin

- Super Simple Software's consultancy in these above technology will always assure your solution with long life and high returns

- Our support in these very strong and proven technologies , your solutions and investments will be **Reliable** and **Latest**

- Deep thought time has to be given on technology and software architecture, else solutions are left with either, unreliable or outdated technology that no one is ready to support.
